

E-Commerce Sales Dashboard

Complete Step-by-Step Guide: KPIs, Pivot Tables & Dashboard Construction

This dataset covers order fulfillment, revenue, profitability, regional distribution, and warehouse management using key attributes like `OrderID`, `OrderDate`, `DeliveryPartner`, `PackageType`, `OrderPriority`, `Region`, `OrderQuantity`, `SafetyStock`, `ShippingCost`, `ProductName`, `UnitPrice`, `UnitCost`, `WarehouseLocation`, `ItemRevenue`, `ItemCost`, `TotalFinancialLoss`, and `NetProfit`.

RECOMMENDED KPIS (KEY PERFORMANCE INDICATORS)

Position these summary cards across the top header of your executive dashboard:

KPI CARD	FORMULA / FIELD	DESCRIPTION
Total Revenue	<code>=SUM(ItemRevenue)</code>	Gross sales income generated across all orders.
Total Net Profit	<code>=SUM(NetProfit)</code>	Net earnings generated after costs and shipping.
Profit Margin %	<code>=SUM(NetProfit)/SUM(ItemRevenue)</code>	Overall profitability percentage.
Total Orders	<code>=COUNTA(OrderID)</code>	Unique count of processed customer orders.
Total Financial Loss	<code>=SUM(TotalFinancialLoss)</code>	Total money lost to returns, damages, or delays.
Total Shipping Cost	<code>=SUM(ShippingCost)</code>	Total logistics and delivery expenses incurred.

ESSENTIAL PIVOT TABLES & VISUALIZATIONS

Create these Pivot Tables on a dedicated backend tab and link the generated charts to your main dashboard sheet.

1. Top 10 Products by Net Profit & Revenue Rows: ProductName Values: Sum of ItemRevenue, Sum of NetProfit Filter/Sort: Sort NetProfit descending → Top 10 Filter. Recommended Chart: Combo Chart (Clustered Column for Revenue, Line for Net Profit).
2. Regional Sales & Profitability Breakdown Rows: Region Values: Sum of ItemRevenue, Sum of NetProfit Recommended Chart: Grouped Bar Chart or Map Chart.

3. Monthly Sales & Financial Loss Trend

Rows: OrderDate (Grouped by Year & Month)

Values: Sum of ItemRevenue, Sum of TotalFinancialLoss

Recommended Chart: Line Chart or Area Chart.

4. Delivery Partner & Warehouse Performance

Rows: WarehouseLocation, DeliveryPartner

Values: Sum of ShippingCost, Sum of TotalFinancialLoss, Count of OrderID

Recommended Chart: Stacked Bar Chart or Matrix Table.

5. Order Priority & Packaging Cost Analysis

Rows: OrderPriority, PackageType

Values: Sum of OrderQuantity, Average of ShippingCost

Recommended Chart: Donut Chart or Treemap.

STEP-BY-STEP IMPLEMENTATION GUIDE

1 Clean and Format Raw Dataset

Ensure data integrity before analyzing

1. Select the entire data table and press **Ctrl + T** to format as an **Excel Table** named **SalesData**.
2. Ensure **OrderDate** is set to Date format, and financial fields (**ItemRevenue**, **NetProfit**, **ShippingCost**) are set to Currency format.
3. Add a calculated column for Margin %: **=[@NetProfit]/[@ItemRevenue]**.

2 Build Backend Pivot Tables

Separate calculations from user dashboard tab

1. Insert a new sheet named **Backend_Pivots**.
2. Go to **Insert** → **PivotTable** and build the 5 Pivot Tables described above.
3. Format all values as Currency (**\$#,##0**) or Numbers with comma separators.

3 Generate Pivot Charts

Create clean visuals for reporting

1. Select each Pivot Table and press **Alt + F1** to create its respective PivotChart.
2. Remove gridlines, legend titles, and field buttons for a clean presentation style.

4 Design the Executive Dashboard Sheet

Structure the interface visually

1. Create a clean tab named **Dashboard** and hide gridlines (**View** → Uncheck **Gridlines**).
2. Insert Rectangular Shapes for top KPI cards and link them to cell formulas on your Backend sheet.
3. Arrange Pivot Charts in a balanced 2x2 or 3x2 grid layout.

5

Insert Interactive Slicers

Enable dynamic cross-filtering

1. Select any Pivot Chart → **PivotChart Analyze** → **Insert Slicer**.
2. Choose **Region**, **DeliveryPartner**, **OrderPriority**, and **WarehouseLocation**.
3. Right-click each Slicer → **Report Connections** → Select **ALL Pivot Tables**.
